

MOHAMMED YUSUF

Backend Software Engineer

+91 8056660332 | mohammedyusuf1799@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Software Engineer with 3+ years of experience building and maintaining Java and Spring Boot backend systems at scale. Skilled in microservices architecture, event-driven design with Apache Kafka, REST API development, and CI/CD automation with Docker and Jenkins. Microsoft Azure Security certified with hands-on experience in cloud security and self-hosted infrastructure.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Frameworks: Spring Boot, Spring Framework, Spring Data, Hibernate, Apache Kafka, JUnit, Mockito, Microservices, REST API

Cloud & DevOps: Docker, Jenkins, GitHub Actions, Hydra, XLR, ELF, Traefik, Linux Server Administration

Databases: MySQL, PostgreSQL, SQLite

Tools: IntelliJ IDEA, Maven, GitHub, SonarQube, Swagger, GitHub Copilot

EXPERIENCE

Tata Consultancy Services

Bengaluru, India

System Engineer

Aug 2022 – Present

- Worked across the full software development lifecycle using Agile methodologies, from gathering requirements and writing code to deployment and production support.
- Migrated legacy .NET and mainframe systems to Java and Spring Boot, building 40+ REST API endpoints that improved application execution speed by 35%.
- Built event-driven backend services using Apache Kafka to handle high-throughput data processing, reducing system load and improving overall efficiency by 40%.
- Managed application deployments using Hydra and XLR, and set up CI/CD pipelines with Docker and Jenkins that cut build times by 20%.
- Maintained 100% unit test coverage using JUnit and Mockito, with SonarQube quality gates enforced on every release, resulting in 30% fewer production defects.
- Trained and supported 20+ junior engineers on Java and Spring Boot development, helping the team adopt new technologies and improve delivery speed by 20%.

PROJECTS

Falak — Self-Hosted Homelab | Ubuntu Server, Docker, Traefik, Prometheus, Grafana, CrowdSec

2025 – Present

- Built a personal homelab server running 10+ self-hosted services (Vaultwarden, Nextcloud, n8n, AdGuard Home) on Ubuntu with Docker and Traefik v3 as a reverse proxy, automated TLS via Let's Encrypt, Tailscale for remote access, CrowdSec for threat detection, and Authelia SSO with TOTP two-factor authentication.
- Set up a full monitoring stack using Prometheus, Grafana, and Alertmanager with custom alert rules; automated daily encrypted local backups and weekly AES-256 offsite backups to Google Drive using rclone, with Uptime Kuma for service availability monitoring.

Event-Driven Kafka Pipeline | Apache Kafka, Spring Boot, Java

TCS – 2023

- Built an event-driven microservices pipeline using Apache Kafka to replace synchronous REST calls in high-throughput financial transaction workflows.
- Reduced processing latency by 35% and improved overall system throughput by 40% after the migration to the event-driven approach.

Legacy System Migration | Java, Spring Boot, REST API, Docker

TCS – 2022

- Migrated a legacy .NET and mainframe application to a Java and Spring Boot microservices architecture, building 40+ REST API endpoints with better scalability and 35% faster execution.
- Set up CI/CD pipelines with Docker and Jenkins that cut build times by 20%, and enforced 100% test coverage with JUnit and SonarQube quality checks, reducing post-release defects by 30%.

EDUCATION

AVS Engineering College

Tamil Nadu, India

B.E. in Mechanical Engineering (CGPA: 7.49)

2016 – 2020

CERTIFICATIONS

Microsoft Certified: Azure Security Engineer Associate | Microsoft

2023 – 2026

- Credential ID: [C2BED8FD1B1373F](#)
